

Java

```
class Solution {  
    public int minQueenMoves(int[] source, int[] target) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {number[]} source  
 * @param {number[]} target  
 * @return {number}  
 */  
var minQueenMoves = function(source, target) {  
  
};
```

TypeScript

```
function minQueenMoves(source: number[], target: number[]): number {  
  
};
```

C++

```
class Solution {
```

```
public:
    int minQueenMoves(vector<int>& source, vector<int>& target) {

    }
};
```

C#

```
public class Solution {
    public int MinQueenMoves(int[] source, int[] target) {

    }
}
```

Kotlin

```
class Solution {
    fun minQueenMoves(source: IntArray, target: IntArray): Int {

    }
}
```

Go

```
func minQueenMoves(source []int, target []int) int {

}
```
